

**Acustica Beyma's** new 5CX200Nd is a compact and powerful 5" coaxial speaker able to work in a full range of applications thanks to the low frequency extension of the woofer, an accurate and clear mid frequency response and controlled high frequencies.

The woofer membrane includes a Santoprene surround, which provides extended displacement capabilities, resulting in an outstanding low frequency response for such a small unit.

Also new is the 12SW1300Nd 12" subwoofer which provides 2400W of power capacity (program) with the control and stability required for the most demanding applications. The company says it is perfect for high performance compact systems within low space, when it's also necessary to have high SPLs, reliability and quality.
